Full Stack Developer with a background in web design, specialized in both Front-end and Back-end. Knowledge of agile methodologies, Git, data structures, algorithms, and CSS frameworks, among others.

I have two years of experience on an international promotional events management platform, where I worked end to end: frontend in Vue 3 (SSR) and React, backend in Kotlin and Spring Boot, and infrastructure on AWS. Full Stack training at Henry Bootcamp and two prior internships.

Logical approach, adaptability, communication, problem-solving, and strong teamwork skills.

PROFESSIONAL EXPERIENCE

42i · Software Developer Oct. 2024 – Sept. 2026

Promotional Events Management Platform (Pulip)

Jan. 2025 – Sept. 2026 · Team of 3-4 devs

- Informally led, for approximately one year, the team behind the company's main project: coordinated directly with the client, estimated and distributed weekly tasks, and reviewed pull requests from an external team brought in by the client. Delivered 4 high-traffic events internationally like Hot Sale and Hot Fashion in Mexico, Glam Days in Argentina, and Cyber Days in Guatemala (2 editions each), managing priorities under pressure.
- Refactored the user click tracking and ranking system, which previously went through the web app, a Lambda, MySQL, and Redis with slow response times and was hard to debug, resolving it directly from the web app using DynamoDB indexes. This significantly sped up updates and added daily click metrics in addition to totals.
- Designed and implemented a restricted API profile within the same backend to integrate with an external chatbot, with API key authentication and rate limiting. Defined the architecture (ALB, Aurora read replica, dedicated ECS task) and put together the cost budget so the client could size the investment without overloading the main service.
- Adjusted AWS infrastructure sizing (ECS tasks, Redis, and OpenSearch) based on estimated traffic and previous usage peaks for each event, to keep the site stable without downtime.
- Fixed bugs stemming from a back office library migration (including React 12 to 18), introduced a new library, TipTap, replacing a deprecated and limited rich-text editor, addressing client needs such as inserting images and emojis, and adjusting styling for correct rendering on the web. I optimized the content publishing flow from the back office, which previously took minutes to reflect on the site, by identifying bottlenecks in Redis and OpenSearch to achieve near-instant updates.
- Documented the event launch processes, leaving a clear foundation for anyone to kick off a new edition.

Crypto Asset Exchange Platform (Web3)

Oct. 2024 – Dec. 2024 · Team of 3

- Built the fixed-term deposit interface with compound interest in Next.js and TypeScript, with yield projections calculated directly in the UI.
- Connected the smart contracts to the backend via Web3.js on the TRON testnet, and adjusted the Solidity contracts to support the module's operations.
- Designed test cases with Jest, mainly covering the contracts and also the interface, to support scaling the project safely.
- Worked with Prisma and Docker in a team of 3, using Kanban methodology and Linear for task management.

Swaply · Web Developer (Internship) Aug. 2024 – Oct. 2024

Currency exchange web platform

- Integrated the PayPal payment system via its API and official tools, enabling users to securely complete currency exchange transactions.
- Applied a responsive approach to several pages of the site, notably improving the experience on mobile devices.
- Built interfaces with React.js, Next.js, Tailwind CSS, and HTML5, contributing ideas to improve site functionality.

- Worked as part of a team using Git, GitHub, and GitFlow, aligned with company goals, aiming for greater efficiency and contributing to site growth.

Awaq ONGD · Full Stack Developer (Internship) Jan. 2024 – Feb. 2024

- Developed landing pages, dashboards, and web applications with React, Redux, TypeScript, Tailwind CSS, and PostgreSQL.
- Designed and maintained interfaces and frontend components.
- Built the backend foundation for a platform for prospective students: architecture, code organization, environment setup, and documentation.

Henry Bootcamp · Full Stack Teaching Assistant Dec. 2023 – Feb. 2024

- Coordinated a group of students to help integrate them into the study team.
- Assisted with exercise resolution and encouraged group collaboration through pair programming.
- Proposed ideas to improve the bootcamp's processes.

TECHNOLOGIES

- **Languages:** Kotlin, Java, TypeScript, JavaScript, Python
- **Frontend:** Vue 3 (SSR and client-side), React, Next.js, Astro, Redux, Sass, Tailwind CSS, Webpack, Rspack, Vite, CoreUI, TipTap
- **Backend:** Spring Boot, JPA/Hibernate, JWT, OpenAPI/Swagger, MapStruct, Node.js, Express, Prisma, Sequelize, Mongoose
- **Databases & Search:** MySQL, PostgreSQL, MongoDB, DynamoDB, Redis, OpenSearch
- **AWS:** ECS Fargate, RDS, ElastiCache, S3, SQS, SES, Lambda, ALB, WAF, CloudWatch, Athena, Secrets Manager
- **Web3:** Solidity, Truffle, Web3.js, Infura, MetaMask, Ethereum (Sepolia testnet)
- **Tools:** Docker, Git, Gradle, Make, Taskfile, LocalStack, Postman, Asana, Linear, Jira
- **Methodologies:** Scrum, Kanban

EDUCATION & LANGUAGES

- Full Stack Web Developer, Henry Bootcamp. 800-hour theoretical-practical program. 2023.
- High School Diploma in Economics and Business Administration. 2014 – 2019.
- Languages: Native Spanish · English B2
